## EDUCATION

**B.S. in Computer Information Systems**

Expected May 2027

*California State University San Marcos*

3.875 GPA

**Relevant Courses:** Data Structures & Algorithms, Object Oriented Programming, Web Programming, Cloud Computing, Database Systems, Intro to Networking, Computer Systems Analysis & Design

---

## PROJECTS

### **Flask Blackjack Project, *Personal Project***

- Applied object-oriented programming principles in Python to architect a multi-class game engine with clean separation of game logic, RESTful API endpoints, and frontend presentation layers.
- Practiced full-stack web development by integrating a Flask backend with an HTML/CSS/JS frontend, using asynchronous fetch calls to handle live game state without page reloads
- Demonstrated design fundamentals for input validation, state management, algorithm implementation

### **Secure Password Manager, *Personal Project***

- Engineered encrypted password management system using Python with Fernet symmetric encryption and PBKDF2 key derivation, implementing zero-knowledge architecture
- Developed password strength analyzer with entropy evaluation and pattern recognition algorithm, scoring passwords on length, character diversity, and common attack vector detection.
- Created modular codebase with separation of concerns, utilizing industry-standard cryptography library

### **League Management System, *Personal Project***

- Built a C++ command-line application using raw SQLite C API calls to manage soccer leagues, including automated schedule generation, standings tracking, and payment management
- Implemented a round-robin algorithm with a modular slot-rotation offset to fairly distribute game times across teams, applying data structures and algorithms concepts from coursework to a real problem
- Designed a normalized relational schema with cascading foreign keys and indexed queries

---

## PROFESSIONAL EXPERIENCE

**Intern - Product Engineer**, Arlo Technologies, Carlsbad, California

April 2026 – Present

- Collaborate with cross-functional engineering teams to design, test, and validate next-generation smart home security devices
- Develop and execute test plans to evaluate product performance, reliability, and user experience
- Assemble, configure, and debug hardware prototypes, supporting iterative product development cycles
- Analyze test data and report findings to improve product quality and functionality
- Support embedded systems, networking, and software integration across cloud-connected devices

**League/Office Manager**, North County Soccer Park, Poway, California

June 2023 – April 2026

- Managed daily operations of a busy soccer park with over 2,000 active customers, ensuring a high-quality experience for customers and staff
- Trained and managed a team of employees, providing guidance and feedback to improve performance
- Addressed customer inquiries and resolved complaints in a timely and professional manner
- Operated and maintained the online database, ensuring accurate record-keeping and efficient scheduling

---

## SKILLS

**Programming Languages:** C++, C, SQL, Python, HTML/CSS/JS

**Frameworks:** Node.js, Express.js, React.js, Flask

**Developer Tools:** Git/Github, AWS, Docker, Oracle DB, VSCode
